Comput. Methods Appl. Mech. Engrg. 134 (1996) 377–381

Computer methods in applied mechanics and engineering

Subject Index of Volume 134

Boundary element methods
Coupling boundary-elements and finite-elements—A structured approach, U. Häußler-Combe 117–134
Parallel adaptive boundary element analysis, N. Kamiya, H. Iwase and E. Kita 341–350

Coupled problems
Geometric conservation laws for flow problems with moving boundaries and deformable meshes, and their impact on aeroelastic computations, M. Lesoinne and C. Farhat 71– 90
The lifting rotor inflow mode shapes and blade flapping vibration system eigen-analysis, Y.-R. Wang and D.A. Peters 91–105
Non-linear transient analysis of submerged circular plates subjected to underwater explosions, J. Jiang and M.D. Olson 163–179

Design of programs
Coupling boundary-elements and finite-elements—A structured approach, U. Häußler-Combe 117–134

Dynamics
Energy decaying scheme for non-linear beam models, O.A. Bauchau and N.J. Theron 37– 56
Finite element modeling of scattering problems involving infinite domains using drilling degrees of freedom, J. Kim, V.V. Varadan and V.K. Varadan 57– 70
The lifting rotor inflow mode shapes and blade flapping vibration system eigen-analysis, Y.-R. Wang and D.A. Peters 91–105
Non-linear transient analysis of submerged circular plates subjected to underwater explosions, J. Jiang and M.D. Olson 163–179
On the stability of symplectic and energy-momentum algorithms for non-linear Hamiltonian systems with symmetry, O. Gonzalez and J.C. Simo 197–222

Elasticity
Derivative superconvergence of rectangular finite elements for the Reissner–Mindlin plate, Z. Zhang and S. Zhang 1– 16
Finite element modeling of scattering problems involving infinite domains using drilling degrees of freedom, J. Kim, V.V. Varadan and V.K. Varadan 57– 70
Geometric conservation laws for flow problems with moving boundaries and deformable meshes, and their impact on aeroelastic computations, M. Lesoinne and C. Farhat 71– 90

Electromagnetic fields
A time domain unstructured grid approach to the simulation of electromagnetic scattering in piecewise homogeneous media, K. Morgan, O. Hassan and J. Peraire 17– 36

Finite element and matrix methods
Derivative superconvergence of rectangular finite elements for the Reissner–Mindlin plate, Z. Zhang and S. Zhang 1– 16
A time domain unstructured grid approach to the simulation of electromagnetic scattering in piecewise homogeneous media, K. Morgan, O. Hassan and J. Peraire 17– 36
Energy decaying scheme for non-linear beam models, O.A. Bauchau and N.J. Theron 37– 56
Finite element modeling of scattering problems involving infinite domains using drilling degrees of freedom, J. Kim, V.V. Varadan and V.K. Varadan 57– 70
Geometric conservation laws for flow problems with moving boundaries and deformable meshes, and their impact on aeroelastic computations, M. Lesoinne and C. Farhat 71– 90
Quadratic, streamline upwinding for finite element method solutions to 2-D convective transport problems, B.M. DeBlois 107–115
Coupling boundary-elements and finite-elements—A structured approach, U. Häußler-Combe 117–134
A critical displacement approach for predicting structural instability, E. Oñate and W.T. Matias 135–161
Non-linear transient analysis of submerged circular plates subjected to underwater explosions, J. Jiang and M.D. Olson 163–179
A local predictive convection–diffusion refinement indicator for the Tri–Tree adapted finite element multigrid algorithm of the Navier–Stokes equations, S.Ø. Wille 181–196
Numerical computation of algorithmic (consistent) tangent moduli in large-strain computational inelasticity, C. Miehe 223–240
Finite element simulation of mold filling using marker particles and the k-ϵ model of turbulence, K. Zaidi, B. Abbès and C. Teodosiu 241–247
Three-dimensional unstructured mesh generation: Part 1. Fundamental aspects of triangulation and point creation, Y. Zheng, R.W. Lewis and D.T. Gethin 249–268
Three-dimensional unstructured mesh generation: Part 2. Surface meshes, Y. Zheng, R.W. Lewis and D.T. Gethin 269–284
Three-dimensional unstructured mesh generation: Part 3. Volume meshes, R.W. Lewis, Y. Zheng and D.T. Gethin 285–310
Simulation of multiple spheres falling in a liquid-filled tube, A.A. Johnson and T.E. Tezduyar 351–373

Fluid mechanics
Geometric conservation laws for flow problems with moving boundaries and deformable meshes, and their impact on aeroelastic computations, M. Lesoinne and C. Farhat 71– 90
The lifting rotor inflow mode shapes and blade flapping vibration system eigen-analysis, Y.-R. Wang and D.A. Peters 91–105
Quadratic, streamline upwinding for finite element method solutions to 2-D convective transport problems, B.M. DeBlois 107–115
Non-linear transient analysis of submerged circular plates subjected to underwater explosions, J. Jiang and M.D. Olson 163–179
A local predictive convection–diffusion refinement indicator for the Tri–Tree adapted finite element multigrid algorithm of the Navier–Stokes equations, S.Ø. Wille 181–196
Finite element simulation of mold filling using marker particles and the k-ϵ model of turbulence, K. Zaidi, B. Abbès and C. Teodosiu 241–247
Simulation of multiple spheres falling in a liquid-filled tube, A.A. Johnson and T.E. Tezduyar 351–373

General Rayleigh–Ritz and Galerkin techniques
Finite element modeling of scattering problems involving infinite domains using drilling degrees of freedom, J. Kim, V.V. Varadan and V.K. Varadan 57– 70
Geometric conservation laws for flow problems with moving boundaries and deformable meshes, and their impact on aeroelastic computations, M. Lesoinne and C. Farhat 71– 90

Graphics
Three-dimensional unstructured mesh generation: Part 1. Fundamental aspects of triangulation and point creation, Y. Zheng, R.W. Lewis and D.T. Gethin 249–268
Three-dimensional unstructured mesh generation: Part 2. Surface meshes, Y. Zheng, R.W. Lewis and D.T. Gethin 269–284
Three-dimensional unstructured mesh generation: Part 3. Volume meshes, R.W. Lewis, Y. Zheng and D.T. Gethin 285–310

Incompressible and near incompressible media
Simulation of multiple spheres falling in a liquid-filled tube, A.A. Johnson and T.E. Tezduyar 351–373

Miscellaneous topics
Three-dimensional unstructured mesh generation: Part 1. Fundamental aspects of triangulation and point creation, Y. Zheng, R.W. Lewis and D.T. Gethin 249–268
Three-dimensional unstructured mesh generation: Part 2. Surface meshes, Y. Zheng, R.W. Lewis and D.T. Gethin 269–284
Three-dimensional unstructured mesh generation: Part 3. Volume meshes, R.W. Lewis, Y. Zheng and D.T. Gethin 285–310

Nonlinear dynamics of systems
Energy decaying scheme for non-linear beam models, O.A. Bauchau and N.J. Theron 37– 56
On the stability of symplectic and energy-momentum algorithms for non-linear Hamiltonian systems with symmetry, O. Gonzalez and J.C. Simo 197–222

Nonlinear mechanics
Energy decaying scheme for non-linear beam models, O.A. Bauchau and N.J. Theron 37– 56
Geometric conservation laws for flow problems with moving boundaries and deformable meshes, and their impact on aeroelastic computations, M. Lesoinne and C. Farhat 71– 90
A critical displacement approach for predicting structural instability, E. Oñate and W.T. Matias 135–161
On the stability of symplectic and energy-momentum algorithms for non-linear Hamiltonian systems with symmetry, O. Gonzalez and J.C. Simo 197–222
Numerical computation of algorithmic (consistent) tangent moduli in large-strain computational inelasticity, C. Miehe 223–240
Finite element simulation of mold filling using marker particles and the k-ϵ model of turbulence, K. Zaidi, B. Abbès and C. Teodosiu 241–247
Simulation of multiple spheres falling in a liquid-filled tube, A.A. Johnson and T.E. Tezduyar 351–373

Numerical solution procedures
A time domain unstructured grid approach to the simulation of electromagnetic scattering in piecewise homogeneous media, K. Morgan, O. Hassan and J. Peraire 17– 36

Energy decaying scheme for non-linear beam models, O.A. Bauchau and N.J. Theron 37– 56
Finite element modeling of scattering problems involving infinite domains using drilling degrees of freedom, J. Kim, V.V. Varadan and V.K. Varadan 57– 70
Geometric conservation laws for flow problems with moving boundaries and deformable meshes, and their impact on aeroelastic computations, M. Lesoinne and C. Farhat 71– 90
The lifting rotor inflow mode shapes and blade flapping vibration system eigen-analysis, Y.-R. Wang and D.A. Peters 91–105
Quadratic, streamline upwinding for finite element method solutions to 2-D convective transport problems, B.M. DeBlois 107–115
Coupling boundary-elements and finite-elements—A structured approach, U. Häußler-Combe 117–134
Non-linear transient analysis of submerged circular plates subjected to underwater explosions, J. Jiang and M.D. Olson 163–179
On the stability of symplectic and energy-momentum algorithms for non-linear Hamiltonian systems with symmetry, O. Gonzalez and J.C. Simo 197–222
Numerical computation of algorithmic (consistent) tangent moduli in large-strain computational inelasticity, C. Miehe 223–240
Finite element simulation of mold filling using marker particles and the k-ϵ model of turbulence, K. Zaidi, B. Abbès and C. Teodosiu 241–247
Robust and efficient methods for stochastic finite element analysis using Monte Carlo simulation, M. Papadrakakis and V. Papadopoulos 325–340
Simulation of multiple spheres falling in a liquid-filled tube, A.A. Johnson and T.E. Tezduyar 351–373

Plasticity
A critical displacement approach for predicting structural instability, E. Oñate and W.T. Matias 135–161
Numerical computation of algorithmic (consistent) tangent moduli in large-strain computational inelasticity, C. Miehe 223–240

Problems in physics
On the stability of symplectic and energy-momentum algorithms for non-linear Hamiltonian systems with symmetry, O. Gonzalez and J.C. Simo 197–222

Shells and plates
Derivative superconvergence of rectangular finite elements for the Reissner–Mindlin plate, Z. Zhang and S. Zhang 1– 16
Non-linear transient analysis of submerged circular plates subjected to underwater explosions, J. Jiang and M.D. Olson 163–179

Solution of differential equations
A time domain unstructured grid approach to the simulation of electromagnetic scattering in piecewise homogeneous media, K. Morgan, O. Hassan and J. Peraire 17– 36

Solutions of ordinary and partial differential equations
Energy decaying scheme for non-linear beam models, O.A. Bauchau and N.J. Theron 37– 56

Stability in structural mechanics
The lifting rotor inflow mode shapes and blade flapping vibration system eigen-analysis, Y.-R. Wang and D.A. Peters 91–105

A critical displacement approach for predicting structural instability, E. Oñate and W.T. Matias 135–161

Stochastic processes
Robust and efficient methods for stochastic finite element analysis using Monte Carlo simulation, M. Papadrakakis and V. Papadopoulos 325–340

Structural mechanics
Derivative superconvergence of rectangular finite elements for the Reissner–Mindlin plate, Z. Zhang and S. Zhang 1– 16
Energy decaying scheme for non-linear beam models, O.A. Bauchau and N.J. Theron 37– 56
The lifting rotor inflow mode shapes and blade flapping vibration system eigen-analysis, Y.-R. Wang and D.A. Peters 91–105
A critical displacement approach for predicting structural instability, E. Oñate and W.T. Matias 135–161
Non-linear transient analysis of submerged circular plates subjected to underwater explosions, J. Jiang and M.D. Olson 163–179
Numerical computation of algorithmic (consistent) tangent moduli in large-strain computational inelasticity, C. Miehe 223–240

Systems of linear and nonlinear simultaneous equations
Robust and efficient methods for stochastic finite element analysis using Monte Carlo simulation, M. Papadrakakis and V. Papadopoulos 325–340

Transport phenomena
Quadratic, streamline upwinding for finite element method solutions to 2-D convective transport problems, B.M. DeBlois 107–115
Simulation of multiple spheres falling in a liquid-filled tube, A.A. Johnson and T.E. Tezduyar 351–373

Turbulence
Finite element simulation of mold filling using marker particles and the k-ϵ model of turbulence, K. Zaidi, B. Abbès and C. Teodosiu 241–247

Unstructured grids
A local predictive convection–diffusion refinement indicator for the Tri–Tree adapted finite element multigrid algorithm of the Navier–Stokes equations, S.Ø. Wille 181–196

Viscous flow
A local predictive convection–diffusion refinement indicator for the Tri–Tree adapted finite element multigrid algorithm of the Navier–Stokes equations, S.Ø. Wille 181–196
Finite element simulation of mold filling using marker particles and the k-ϵ model of turbulence, K. Zaidi, B. Abbès and C. Teodosiu 241–247
Vorticity boundary conditions for Navier–Stokes equations, M. Souli 311–323

Wave motion
A time domain unstructured grid approach to the simulation of electromagnetic scattering in piecewise homogeneous media, K. Morgan, O. Hassan and J. Peraire 17– 36
